To Whom it May Concern:

PCC 267 is a residential Condominium Corporation in Mississauga, Ontario. PL Energy Services completed an ASHRAE Level II Energy Audit for our building in 2017 and recommended several improvements, such as:

- Installation of a Building Automation System (BAS)
- Adding VFD's to the Make Up Air Units
- Boiler replacement

The Corporation proceeded with the items noted above and are pleased to note the projected energy savings forecast by PL Energy Services have been met or exceeded.

We are especially pleased with the installation and energy savings offered by the BAS, PL Energy Services installed and periodically review the BAS operation.

PL Energy Services has continued to offer important support and service regarding improvements to our heating, cooling, updating the BAS and finding rebate opportunities.

We have continued to utilize their services as a valued contractor and have recently engaged them to continue our next energy savings projects.

We will always recommend PL Energy Services for any building looking to reduce costs with a BAS or other energy saving projects. They have helped me as a property manager so many times I have lost count. They are the first company I call when I obtain additional properties, as I know they are the best of the best.

Best,

Tiffany Rana  
Property Manager
